"TO WHOM IT MAY CONCERN"

Manitoba Hazardous Waste Management Corporation has worked with Valley Steel Ltd. on two separate projects over the last year. The first involved the construction of a pre-engineered building to house a large bio-remediation facility. Valley Steel was not the general contractor on this project, but rather provided and erected the building as a package. General supervision, electrical and mechanical work was provided by others. During this project, weather conditions were very unfavourable and coordination of the various trades and suppliers proved to be a challenge. Valley Steel was mindful of the construction schedule and budget, and kept their portion of the project on target as well as assisting others where they could. They responded quickly and efficiently to technical design changes and overcame the inclement weather. We were very pleased with their work.

The second project was the construction of a specialized chemical storage warehouse. Valley Steel participated in the basic design stage and assisted in satisfying some unusual technical requirements. In this project, Valley Steel was asked to act as the general contractor. Scheduling caused this project to extend into the winter months. The project was completed on budget, on time, and to our satisfaction. Valley Steel did an excellent job.

Manitoba Hazardous Waste Management Corporation would not hesitate to recommend Valley Steel Ltd. either as a building supplier or as a general contractor.

Yours sincerely,

J.S. Johnson
General Manager
